ENOSI is a coffee table handcrafted with two natural materials: marble and wood.

The two volumes that compose it are made with slabs with a thickness of 20 and 25 mm respectively and since they are veined materials, the cuts are made in a "continuous vein" with 45° assemblies and epoxy bonding. The two volumes are partially open on the two main sides with visible edges characterized by a tapered profile with angles of different degrees which streamline the perception of thickness, giving visual lightness and refinement.

The wooden part is made with Canaletto walnut blockboard panels painted with water-based polymers.

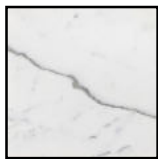

Since these are handcrafted products, the images of the materials used are indicative, photos of the materials actually selected will be provided at the time of the order.
