

Use and maintenance of wood products and / or synthetic materials

1-All Giuseppe Guerrera Design branded products are assembled and tested in the laboratory before packaging and shipment. However, it is recommended to have expert personnel carry out the assembly, checking the correct positioning on the floor or wall.

2-Products made of wood with a natural finish are protected with water-based paint (eco-friendly).

3-The lacquered finish is made with polyurethane, polyester or acrylic paints. This type of finish requires particularly careful maintenance to avoid surface scratches. Ordinary cleaning can be performed with a cloth lightly soaked in water and neutral soap or alcohol diluted with plenty of water. Dry quickly so as not to leave streaks.

4-Avoid improper use that could compromise the stability, functionality of the product and / or aesthetics, such as for example: sitting on or using the product as a ladder, overloading the product with heavy materials not relevant to normal use for the intended purpose, close contact with high irradiation heat sources (stoves and radiators), the use of water jets or liquid detergents for cleaning floors which could deteriorate the surface finish.

5-The presence of sanitary water with a high concentration of limestone could damage the surface creating a limestone patina that can only be removed with a specific mechanical action. In these cases, the installation of a softener is strongly recommended.

6- Also avoid contact with:

- Strongly alkaline chemicals (acetone, caustic soda, etc.)
- Pure ammonia or ammonia based cleaners
- Solvents in general (such as nail or paint solvents, containing trichlorethylene and methylene chloride)
- Whiteners, oily soaps, indelible inks and markers
- Steel sponges and abrasive or micro-abrasive detergents such as creams or powders
- Strong cleaners
- Descaler
- Waxes or polishing additives

7-Avoid the use of sharp tools or abrasive sponges that could damage the surface making it necessary to restore it with mechanical interventions by specialized personnel.

8-To remove dust, the use of a microfiber cloth is recommended. Ordinary cleaning can be carried out with a microfiber cloth soaked in hot water or with the addition of neutral products readily available on the market, always following horizontal or vertical movements. It is possible to request a specific professional product for daily maintenance cleaning from G.M.G marble & design srls (distributor of Giuseppe Guerrera Design brand products), at the e-mail address: info@giuseppeguerrera.it

9-For extraordinary cleaning interventions it is advisable to send an e-mail to info@giuseppeguerrera.it or to contact the nearest retailers of professional lines for natural woods who will be able to indicate the suitable product based on the type of problem to be solved . It is important to promptly remove stains to ensure the effectiveness of its removal treatment.
